PREMIUM HUMULUS OIL

Increased Bioactivity

What Is PREMIUM HUMULUS OIL ?

Kannaway Premium Humulus Oil is an innovative CBD oil sourced from the Humulus kriya plant – rather than hemp, the traditional source for CBD.

Using the Humulus plant, a variety of hops, rather than cannabis plants like hemp has benefits. Many restrictions connected to cannabis-based CBD products do not apply to Kannaway Premium Humulus Oil is also reliable option for people prefer to avoid consuming any cannabis (or hemp) product.

Kannaway Premium Humulus Oil is formulated with ImmunAg™, a patented Humulus kriya (hops) extract high in CBD, terpenes humulene and beta-caryophyllene. ImmunAg™ was developed by a team of doctors using a high CBD Humulus plant discovered in India.

The Benefits of Humulus Oil

The CBD in Kannaway Premium Humulus Oil has increased bioactivity compared to other CBD hemp products on the market today, according to a clinical test. Bioactivity is the magnitude of effects provided by CBD when it interacts with the CB2 receptor.

In Kannaway Premium Humulus Oil Liquid, ImmunAg™ is blended with MCT oil for a pourable, easy to measure CBD product. Kannaway Premium Humulus Oil Liquid contains 1000 mg of CBD in each 4 oz. bottle for approximately one month of daily servings of CBD.

About Non-Cannabis CBD

CBD products created from a non-cannabis source provide a number of advantages over those made with cannabis. CBD is traditionally extracted from the cannabis plant (either hemp or marijuana). Because of this, CBD products typically contain some level of THC – either the trace levels of THC in hemp or the high levels of THC in marijuana. This has led to apprehension in some users about exposure to THC in their CBD products and strict regulations on sale and possession of cannabis-based CBD in some markets.

Instead of using cannabis as a source of CBD, which comes with its unique limitations, the products in this category are made using a patented extract from the Humulus kriya plant - ImmunAg™. These are the first non-cannabis CBD products available for purchase.

Why Non-Cannabis CBD?

The Humulus kriya plant as a source of CBD is a controversy-free way for customers to get their daily CBD supplement. Because they are made with a non-cannabis source of CBD, these products avoid the pitfalls that come with a cannabis-based CBD product.
